

# Fire & Fuels Introduction

10SCIE - Fire & Fuels

Finn LeSueur

2019

## Learning Outcomes

- Refresh lab safety
  - Burns first-aid
  - Refresh chemistry knowledge
- 

## Starter

Look up the temperature at which these fuels burn and place them in order from coolest to hottest.

- Wood, petrol, candle, LPG, coal
- 

## Answer

1. Wood (275°)
  2. Petrol (280°)
  3. Candle (390°)
  4. LPG (500°)
  5. Coal (750°)
- 

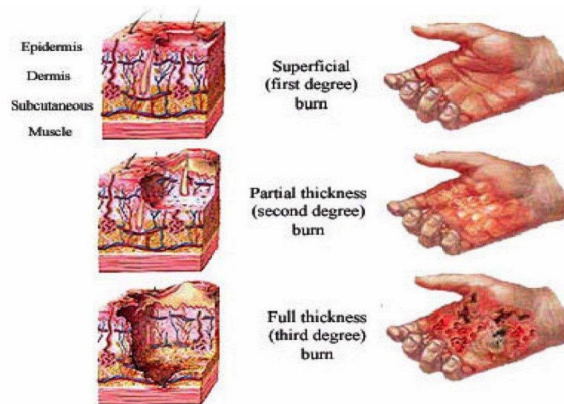

## Lab Safety

- Must wear safety glasses
- Must tie up long hair
- Must attend to loose clothing

---

## Burns

Run under cold water for at least 20 minutes.

---

## Chemical Reactions

- When one or more substances combine to form new substances
- Atoms and molecules split, swap or decompose
- *reactant + reactant → product + product*
- *methane + oxygen → water + carbondioxide*
- **Burning** (combustion) is a type of reaction
