Fire & Fuels Introduction 10SCIE - Fire & Fuels

Finn LeSueur

2019

Learning Outcomes

- Refresh lab safety
- Burns first-aid
- Refresh chemistry knowledge

Starter

Look up the temperature at which these fuels burn and place them in order from coolest to hottest.

• Wood, petrol, candle, LPG, coal

Answer

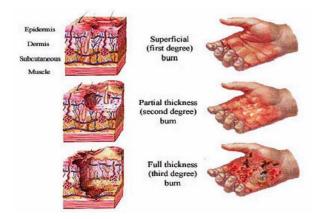

- 1. Wood (275°)
- 2. Petrol (280°)
- 3. Candle (390°)
- 4. LPG (500°)
- 5. Coal (750°)

Lab Safety

- Must wear safety glasses
- Must tie up long hair
- Must attend to loose clothing

Burns

Run under cold water for at least 20 minutes.

Chemical Reactions

- When one or more substances combine to form new substances
- Atoms and molecules split, swap or decompose
- $reactact + reactant \rightarrow product + product$
- $\bullet \hspace{0.2in} methane + oxygen \rightarrow water + carbon dioxide$
- Burning (combustion) is a type of reaction
